

● FACTSHEET

Interface for eIDAS-compliant identity verifications

Every digital interaction begins with a fundamental question: Who is the person on the other end? The answer to this determines trust, security, and the success of digital business models. The challenge is to find a seamless, Europe-wide solution that meets the highest legal standards.

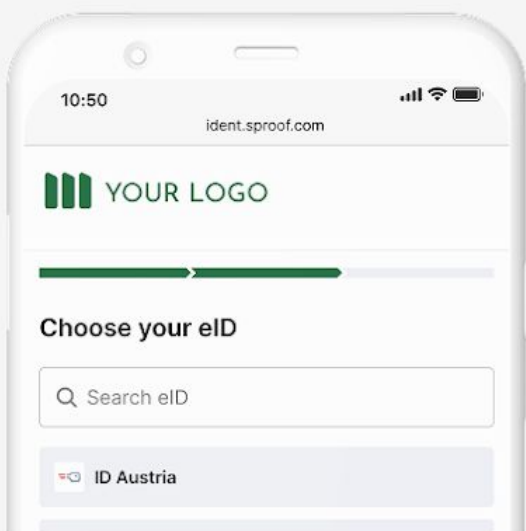

sproof Ident solves this complexity by unifying the diverse identification methods in one central, easy-to-integrate platform. We enable companies to identify external and internal persons in an eIDAS-compliant manner and securely obtain qualified signatures – directly in their existing web applications and processes.

All eID methods, one interface

Whether your customers use an existing national eID or require a new identification via video-ident: sproof Ident integrates all common ident methods into a central, ready-to-use platform via a central REST API. The solution is flexible and can be fully customised to your branding.

eID-Ident

Enables the use of more than 30 national eID services to use existing identifications.

Wallet-Ident

Prepares you for the future by enabling the integration of the European Digital Identity Wallet (EUDI Wallet) today.

Audio-Ident

Allows the creation of a digital identity through guided identification.

eIDAS-compliant identity verification

The eIDAS regulation forms the binding legal framework for digital identity in Europe. It defines the Levels of Assurance (LoA) – from Low to High – which determine the necessary level of trust for electronic identification. For regulated sectors, eIDAS compliance, especially achieving LoA "Substantial" or "High", is non-negotiable.

sproof Ident aggregates procedures that comply with these strict eIDAS standards. This guarantees the highest legal certainty and legally sound evidential value for your sensitive onboarding and KYC processes.

Your start with sproof Ident

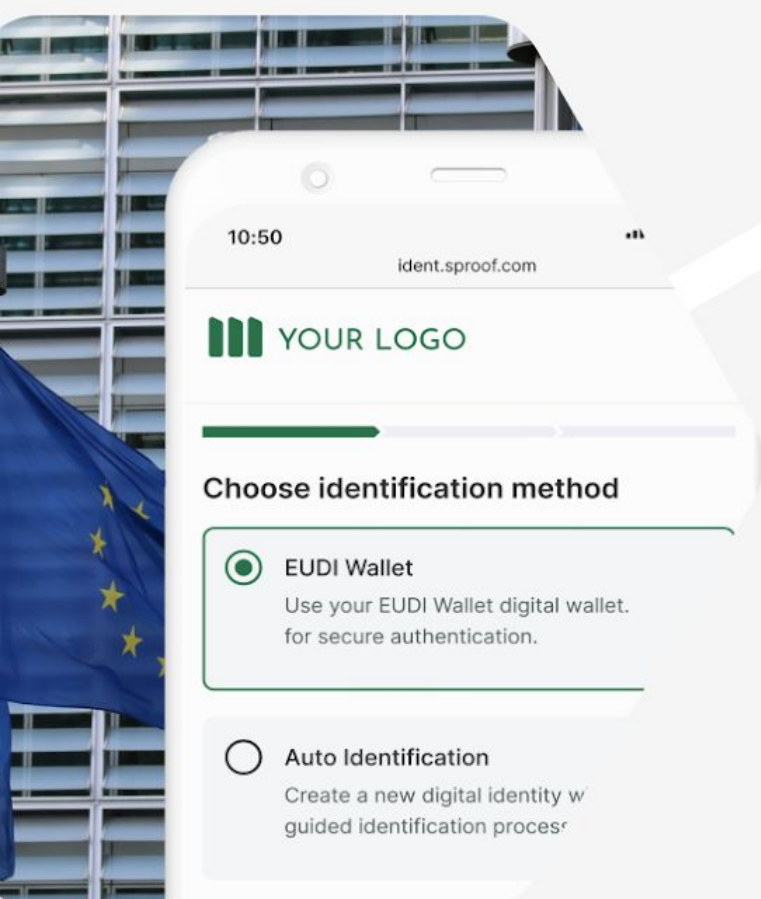

The integration of sproof Ident takes place seamlessly via a REST API. This allows you to integrate all common identification procedures (eID-Ident, Auto-Ident, Wallet Ident) directly into your applications.

Your IT department uses a Unified Standard that bundles the complexity of national and future identity standards (such as EUDI Wallet) in the background. The white-label solution allows you to control the entire process via your own IT environment, while your customers experience the verification in your corporate branding. This minimises development effort and ensures a seamless customer journey.

Secure transfer of your customers' ident data

sproof Ident enables the secure retrieval and transfer of relevant identity attributes, depending on the verification method used. These include:

- given_name
- family_name
- birthdate
- age_over_18, age_over_21 (Age verification without specifying the exact date of birth)
- signature_image (Digital image of the signature)
- main_address (Only available when using ID Austria)
- passport_data
- passport_portrait

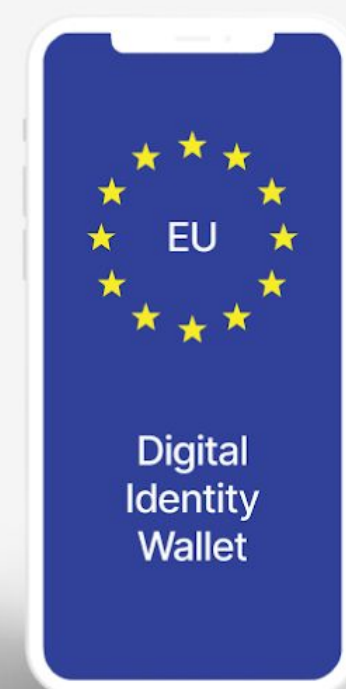

EUDI-Wallet-ready Connector

The introduction of the European Digital Identity Wallets (EUDI Wallets) is imminent. However, widespread availability in EU member states will still take time. With our Unified EUDI-Wallet Connector (UEUDIWC), we already offer a future-proof solution. sproof Ident not only integrates the upcoming EUDI Wallets, but also proven methods such as video-ident, auto-ident, and national eIDs.

Did you know that ...

... contrary to a widespread misunderstanding, there will be no central European EUDI Wallet?

Each EU member state is developing its own national Wallet. These Wallets are interoperable with each other, so that digital identities and proofs can be used across borders.

The European choice for secure identity management

We take the work off your hands and offer you a solution that focuses on maximum acceptance, European independence, future-proofing, and increased efficiency.

Maximum Acceptance

sproof Ident offers the highest success rate in digital identification by combining European EUDI Wallet integration with proven national fallback solutions.

European Independence

All subcontractors and server locations operate exclusively in Europe to ensure the highest data security and GDPR compliance.

Seamless Integration

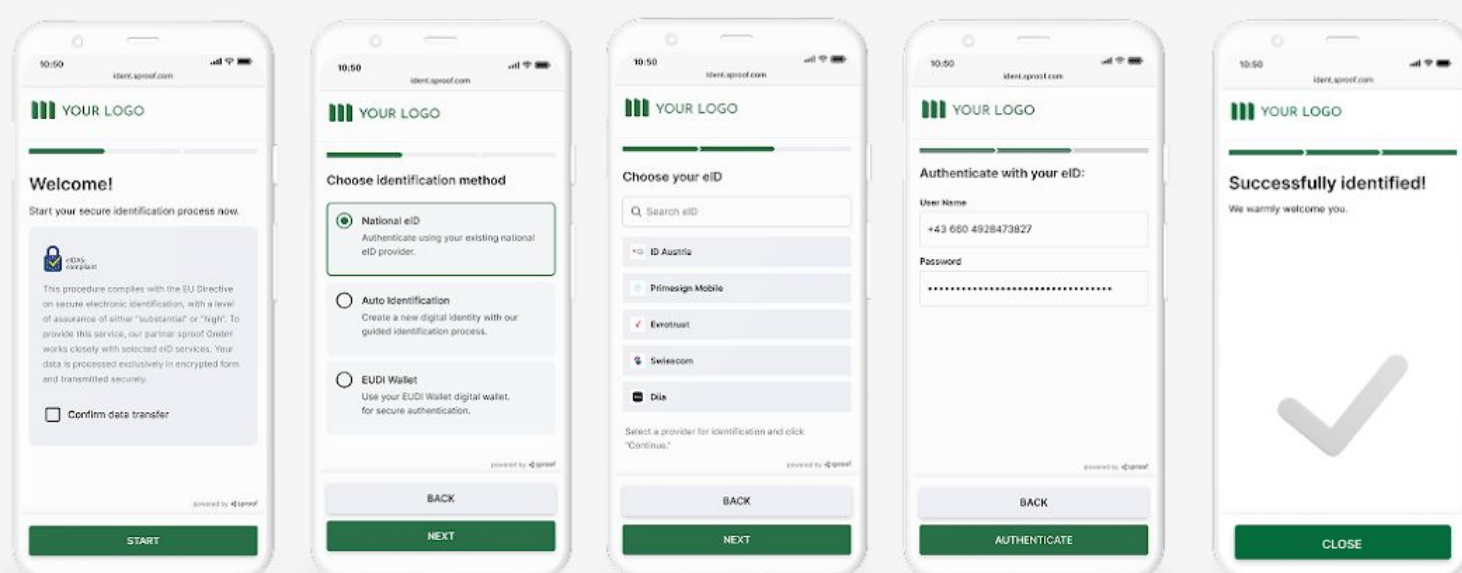

Thanks to a unified standard, you can seamlessly integrate heterogeneous identification procedures into your systems without constant adjustments.

Future-Proofing

sproof Ident is not only relevant today but was developed based on research projects to also overcome future challenges such as post-quantum security.

Custom User Journey

The Custom User Journey is the key to increasing efficiency. We eliminate manual steps through a smooth, digital workflow. The solution is white-label capable, so the entire identification process is integrated into your corporate branding in a brand-compliant manner. This significantly increases conversion rates.

Optimised for industries with high demands

sproof Ident is ideal for companies that need to meet the highest standards in terms of security and compliance.

Financial service providers: Must meet strict regulatory requirements (KYC, AML) for digital account openings and business transactions.

Energy suppliers: Want to simplify the online registration and contract signing of new customers in compliance with EnWG (DE) and EIWOG (AT).

Public administration: Faces the challenge of accelerating the digitisation of administrative procedures and creating secure access to digital services.

Insurance companies: Must ensure legally valid online signing of policies and secure access to sensitive contract data, while adhering to strict regulatory requirements for digital onboarding and contract management.

Human Resources (HR): Faces the task of enabling legally compliant digital processing of employment contracts and other HR-relevant documents.

The European alternative for digital identity checks

sproof is 100% developed in Europe and operated in European data centres. No dependencies on US services, no Cloud Act risks – maximum data sovereignty and security for companies with the highest compliance requirements.

Take the next step

Transform compliance from an obligation into a competitive advantage and shape the digital future of your company with trust and efficiency.

We would be happy to advise you personally to find out how sproof can solve your specific use cases. Arrange an appointment for a personal demo today or test our solution free of charge.
